The Environmental Protection Agency (EPA) Announces the Availability of the Administrative Record for the Lakes Parkway Lithium Batteries Fire Site located in Lawrenceville, Gwinnett County, Georgia

The Lakes Parkway Lithium Batteries Fire Site (the Site) is located at 1665 Lakes Parkway, Lawrenceville, Gwinnett County, Georgia. On December 7, 2021, the Gwinnett County Fire Department responded to a fire inside a battery collection and shipping company in an industrial park complex. The fire department isolated and removed several pallets of smoldering and burning lithium-ion batteries. Two days later, the fire department responded again to the same facility. The fire department notified the National Response Center (NRC) and the Georgia Environmental Protection Division (GAEPD). GAEPD then notified Region 4 Telephone Duty Officer for assistance. On December 10, 2021, the Emergency and Rapid Response Services (ERRS), covered batteries with sand and poly sheets to prevent further reactivity and suppress toxic smoke. Superfund Technical Assessment and Response Team (START) mobilized to the site on December 11, 2021. The crews placed the individual batteries in plastic bags and layered them in steel drums between fire suppressant pellets. There may be additional immediate removal activities for the Site to the extent practicable, which will contribute to the efficient performance of any long-term remedial action at the site.

The Administrative Record is available for public review at:
<https://cumulis.epa.gov/supercpad/CurSites/cadmin-record.cfm?id=0420750&doc=Y&colid=67211>

Site documents will be located at the EPA's Regional Office at 61 Forsyth St., S.W. Atlanta, Georgia 30303. However, EPA's Regional Office is currently closed to the public for an unspecified period.

For further information, please contact Brenda Bonner, EPA Community Involvement Coordinator at (678) 350-4379 or via email at bonner.brenda@epa.gov.
